Defect Intake and Triage

Turns “it’s broken” into something an engineer can act on, or says exactly what is still missing.

What is Cowork?

The part of Microsoft 365 Copilot that **does the work**, not just the chatting. It reads your mail, files and meetings, then prepares the result. By default it asks you before it sends anything.

What a skill is

One file you upload once. It teaches Cowork a job you keep repeating, so you stop explaining it every time. It lives in your own OneDrive.

What this one gives you

Turns a reported problem in mail or Teams into a structured, ticket-ready intake with the evidence attached and the gaps named, then an Adaptive Card for approval before anything is filed.

1. Download the file for this skill
2. In Cowork, open **Customize**
3. Go to the **Skills** tab
4. **Add** → **Upload skill**, pick the file
5. Start a **new** chat and say the words below

Then just say one of these

- *“Turn this bug report into a ticket”*
- *“Is there enough here to raise a defect?”*
- *“Triage what came in”*

What you get back

- A card turning the report into a ticket draft
- The exact fields still missing, written as questions
- Possible duplicates, linked

What it will never do without asking you

- Never file, create, assign or comment on a ticket without approval. Filing requires a work tracker plugin and the user’s explicit go.
- Never attempt reproduction. No terminal, no staging, no browser steps.
- Never declare a duplicate, a root cause or a severity the config does not support.

THE RULE IT FOLLOWS

A triage that concludes “not enough information, here are the three questions” is a success.

YOU NEED

Microsoft 365 Copilot with Cowork switched on by your admin. It is off by default.

NOT ON MOBILE

Uploaded skills only work on a laptop or desktop.

IT IS METERED

Cowork bills on usage. Your admin can cap what you spend.

MAKE IT YOURS
