Incident Digest

Rebuilds what happened and when, from the traffic, so the review starts from a timeline instead of.

What is Cowork?

The part of Microsoft 365 Copilot that **does the work**, not just the chatting. It reads your mail, files and meetings, then prepares the result. By default it asks you before it sends anything.

What a skill is

One file you upload once. It teaches Cowork a job you keep repeating, so you stop explaining it every time. It lives in your own OneDrive.

What this one gives you

Turns the mail and Teams traffic around an incident into a dated timeline with the open questions and who owns each.

1. Download the file for this skill
2. In Cowork, open **Customize**
3. Go to the **Skills** tab
4. **Add** → **Upload skill**, pick the file
5. Start a **new** chat and say the words below

Then just say one of these

- *"Build the timeline for this incident"*
- *"What happened, and when?"*
- *"Prepare the incident review"*

What you get back

- A dated timeline of what happened
- What was observed, what was believed, what is known
- Open questions, each with an owner

What it will never do without asking you

- Never post to a channel, never reply to a thread, never update a status page.
- Never assign an action. List open questions with suggested owners for a human to assign.
- Never state a root cause. Surface what the traffic says and label it belief or finding.

THE RULE IT FOLLOWS — No blame, ever.

YOU NEED
Microsoft 365 Copilot with Cowork switched on by your admin. It is off by default.

NOT ON MOBILE
Uploaded skills only work on a laptop or desktop.

IT IS METERED
Cowork bills on usage. Your admin can cap what you spend.

MAKE IT YOURS
Open *references/config.md* to set the names and thresholds.
