# Defect Intake and Triage

Turns “it’s broken” into something an engineer can act on, or says exactly what is still missing.

## Do this, about two minutes

1. **Download the skill file**
   **defect-intake-triage.zip**
   github.com/kesslernity/awesome-copilot-cowork-bots ↓
2. In Cowork, open **Customize** in the side panel
3. Go to the **Skills** tab
4. Select the arrow next to **Add**, then **Upload skill**, and choose the file
5. Start a **new** chat and say one of these

   *“Turn this bug report into a ticket”*

   *“Is there enough here to raise a defect?”*

   *“Triage what came in”*

Nothing is sent, posted or deleted unless you press a button. **Changed your mind?** Remove the skill from the same **Skills** tab.

## And you get back

- A card turning the report into a ticket draft
- The exact fields still missing, written as questions
- Possible duplicates, linked

## What it will never do without asking you

- Never file, create, assign or comment on a ticket without approval. Filing requires a work tracker plugin and the user’s explicit go.
- Never attempt reproduction. No terminal, no staging, no browser steps.
- Never declare a duplicate, a root cause or a severity the config does not support.

THE RULE IT FOLLOWS

A triage that concludes “not enough information, here are the three questions” is a success.

**Runs when you ask for it.** Want it on a timer? Say *“do this every Monday at 9”* and Cowork schedules it. You get 25 schedules, so spend them on the jobs you would otherwise forget.

**NEW TO COWORK?**
It is the part of Copilot that *does the work*, not just the chatting. A skill is one file that teaches it a job you repeat.

**YOU NEED**
Microsoft 365 Copilot with Cowork switched on by your admin. It is off by default, and not on mobile.

**IT IS METERED**
Cowork bills on usage. Your admin can cap what you spend.

**MAKE IT YOURS**
Open *references/config.md* inside the file to set the names and thresholds.
