Defect Intake and Triage

Turns “it’s broken” into something an engineer can act on, or says exactly what is still missing.

Do this, about two minutes

1. **Download the skill file**
   defect-intake-triage.zip
   github.com/kesslernity/awesome-copilot-cowork-bots ↓
2. In Cowork, open **Customize** in the side panel
3. Go to the **Skills** tab
4. Select the arrow next to **Add**, then **Upload skill**, and choose the file
5. Start a **new** chat and say one of these

   - *“Turn this bug report into a ticket”*
   - *“Is there enough here to raise a defect?”*
   - *“Triage what came in”*

Nothing is sent, posted or deleted unless you press a button. **Changed your mind?** Remove the skill from the same **Skills** tab.

And you get back

- A card turning the report into a ticket draft
- The exact fields still missing, written as questions
- Possible duplicates, linked

What it will never do without asking you

- Never file, create, assign or comment on a ticket without approval. Filing requires a work tracker plugin and the user’s explicit go.
- Never attempt reproduction. No terminal, no staging, no browser steps.
- Never declare a duplicate, a root cause or a severity the config does not support.

THE RULE IT FOLLOWS

A triage that concludes “not enough information, here are the three questions” is a success.

Runs when you ask for it. Want it on a timer? Say *“do this every Monday at 9”* and Cowork schedules it. You get 25 schedules, so spend them on the jobs you would otherwise forget.

NEW TO COWORK?
It is the part of Copilot that *does the work*, not just the chatting. A skill is one file that teaches it a job you repeat.

YOU NEED
Microsoft 365 Copilot with Cowork switched on by your admin. It is off by default, and not on mobile.

IT IS METERED
Cowork bills on usage. Your admin can cap what you spend.

MAKE IT YOURS
Open *references/config.md* inside the file to set the names and thresholds.
