RFI and Query Tracker

Shows which open questions are actually blocking work, rather than which are merely old.

Do this, about two minutes

1. **Download the skill file**
   rfi-query-tracker.zip
   github.com/kesslernity/awesome-copilot-cowork-bots ↓
2. In Cowork, open **Customize** in the side panel
3. Go to the **Skills** tab
4. Select the arrow next to **Add**, then **Upload skill**, and choose the file
5. Start a **new** chat and say one of these

> *"Which RFIs are still open?"*

> *"What is blocking work right now?"*

> *"Who owes us an answer?"*

Nothing is sent, posted or deleted unless you press a button. **Changed your mind?** Remove the skill from the same **Skills** tab.

And you get back

- Every open question, with who owes the answer
- Which ones are actually blocking work
- Overdue items with no stated impact

What it will never do without asking you

- Never answer a query on anyone's behalf, and never draft a technical answer. This tracks; it does not opine on design, method or compliance.
- Never chase externally. Drafts go to the user.
- Never infer what a query blocks.

THE RULE IT FOLLOWS

An empty log is a good day on a project.

Runs when you ask for it. Want it on a timer? Say *"do this every Monday at 9"* and Cowork schedules it. You get 25 schedules, so spend them on the jobs you would otherwise forget.

NEW TO COWORK?
It is the part of Copilot that *does the work*, not just the chatting. A skill is one file that teaches it a job you repeat.

YOU NEED
Microsoft 365 Copilot with Cowork switched on by your admin. It is off by default, and not on mobile.

IT IS METERED
Cowork bills on usage. Your admin can cap what you spend.

MAKE IT YOURS
Open *references/config.md* inside the file to set the names and thresholds.
