MICROSOFT 365 COPILOT COWORK · **START HERE** · FREE, MIT LICENSE

Give Copilot a job it can do without you

23 ready-made bots for Microsoft 365 Copilot Cowork. Each is one file you upload once. After that you ask in plain English, and the work happens inside your own mailbox and files, under your own permissions.

What is Cowork?

The part of Microsoft 365 Copilot that **does the work**, not just the chatting. Chat answers a question in seconds. Cowork reads across your mail, files and meetings and comes back with the finished thing.

What a skill is

One file that teaches Cowork a job you keep repeating, so you stop explaining it every time. It sits in your own OneDrive. Nobody else sees it unless you share it.

Why these are safe to try

Every bot is written to prepare and stop, and Cowork asks before it sends. Approve one action at a time. Cowork cannot delete anything in OneDrive or SharePoint at all.

1. Pick a bot and **download its file**
2. Open **Customize**, left navigation
3. Go to the **Skills** tab
4. **Add → Upload skill**, pick the file
5. Start a **new** chat and ask it for the job

What is in the box

Core / Executive 1 bot	**Team Lead** 3 bots	**Finance & FinOps** 5 bots	**People & HR** 3 bots
IT & Ops 3 bots	**Projects** 3 bots	**Comms** 4 bots	**Sales & BD** 1 bot

THE RULE THEY FOLLOW

Silence is a result. A bot that invents a finding to look busy teaches you to stop reading it.

YOU NEED
Microsoft 365 Copilot, and Cowork switched on by your admin. Off by default.

DESKTOP ONLY
Cowork runs on mobile. Uploaded skills do not. Use a laptop.

IT IS METERED
Cowork bills Copilot Credits as you use it. Your admin sets the policy.

ROOM FOR ALL OF THEM
You can hold 50 skills. These 23 use under half.

Download them all, free — **github.com/kesslernity/awesome-copilot-cowork-bots** ↓

By Mathieu Kessler · **kesslernity.com/store** · v1.0, Nov 2026, checked against Microsoft docs 4 Nov 2026

What you switch on, and what it costs you to switch on

Cowork is off by default and the way it is turned on changed at general availability. The old per-agent allow list is deprecated; access now comes from spending policy.

Before anyone can open Cowork

- A Microsoft 365 Copilot license for the user.
- Usage-based billing enabled in the tenant. Cowork is off until it is.
- A spending policy that selects Cowork: admin center, Copilot, Cost management.
- The user in scope of that policy. Cowork is limited to Anthropic-supported regions.

The thing that catches people out

- A spending policy is an access control, not only a budget.
- Any user in scope who selects Cowork can use it, however small the limit. One credit still grants access.
- To keep someone out, leave them out of every policy that selects Cowork. Do not lower their limit.
- Enforcement is asynchronous, so a cap is not an instant stop.

Rolling these skills out

- Each user uploads their own. There is no tenant-wide install for a custom skill.
- A user can hold 50 custom skills and 25 scheduled prompts. Skills are cheap; schedules are scarce.
- Per skill: SKILL.md up to 1 MB, up to 20 companion files, 10 MB total.
- Uploaded skills do not work on Cowork mobile. Cowork itself does.

Test before you schedule

- Upload one skill, run it once on a quiet week, and read the output before anyone schedules it.
- After editing references/config.md, start a NEW conversation. Changes apply to new sessions only.
- Automated task activity lands in the unified audit log; Purview policies apply.

Microsoft does not validate custom skills created by users.
A skill runs as instructions to the AI, so treat an uploaded file the way you would treat a script. Read SKILL.md before you approve a skill for your organization. Everything in this catalog is plain text and readable in under two minutes.

By Mathieu Kessler · kesslernity.com/store · v1.0, Nov 2026, checked against Microsoft docs 4 Nov 2026

© 2026 Kesslernity · MIT license

Instructions in a text file, running as the user

No code executes. The exposure is what the instructions tell the model to read, and whether anyone read the instructions first.

What a skill actually is

- A plain-text Markdown file in the user's own OneDrive, at /Documents/Cowork/skills/.
- It contains instructions, not code. Nothing is executed.
- It runs as the user who invoked it and sees only what that user can see.
- It cannot reach local files, cannot read encrypted files, and cannot delete anything in OneDrive or SharePoint.

Where the risk actually is

- Microsoft does not validate custom skills created by users. A skill is instructions to the AI.
- Approval can be skipped: a user may approve and skip similar prompts for the rest of a session, scoped to a recipient, a domain, or always.
- Scheduled and event-driven tasks run with nobody watching, though they default to draft-and-approve.
- The only durable control is reading the file. Every one here is plain text.

6 of these 23 skills read personal or HR data.
expense reconciliation, internal expert finder, interview loop coordinator, onboarding buddy, one to one prep, subscription hunter. Before anyone runs one of these against other people's data, clear it with HR, your works council and privacy. Sensitivity labels carry through to what Cowork produces, and the output lands in the user's own OneDrive.

What this catalog commits to

- Every skill reads and prepares, then stops. Sending, posting and deleting are not in any skill's instructions.
- Every output line cites the mail, file or meeting it came from. An unsourced line is a defect.
- No skill advises on safety authorisation: permit to work, lock-out tag-out, confined space, JSA, incident classification, inspection sign-off.
- Nothing is obfuscated, minified or compiled. MIT license, read it all.

Questions worth asking before approval

- Which mailbox, which site, which calendar does this read? It is written in the skill's Inputs section.
- What happens on a quiet period? Every skill here states its silent case.
- Who sees the output? The creating user only, unless they approve otherwise.
- What is in the audit log? Automated task activity is recorded alongside other Cowork activity.

© 2026 Kesslernity · MIT license

The skills are free. The runtime is metered.

Nothing here is a license purchase. The cost is Copilot Credits consumed when a skill runs, and the lever is the spending policy.

What this costs

- These 23 skills cost nothing. MIT license, no purchase, no subscription, no email required.
- What costs money is Cowork itself, which bills Copilot Credits on usage.
- Model responses, tool and skill calls, image generation and browser tasks all consume credits.
- There is no per-skill fee. A skill is a text file; running it is what meters.

Where the control sits

- A spending policy in Microsoft 365 admin center, Copilot, Cost management.
- Limits can be set per tenant, per group or per user.
- That policy is also the access control. Any user in scope can use Cowork however small the limit.
- Enforcement is asynchronous, so treat a cap as a boundary, not a hard stop.

What moves the number

- Reasoning effort, which sits next to the model picker and defaults to Medium.
- Which model runs. Auto is the default and picks for the task.
- Scheduled prompts, because they run whether or not anyone needed them that week.
- Type /cost in a session to see usage so far.

The budgeting mistake to avoid

- A user can hold 50 custom skills but only 25 scheduled prompts.
- Skills are free to hold and cost nothing until invoked.
- Schedules are the recurring line, because each one runs on a clock regardless of need.
- Every skill here runs on demand by default. A schedule is opt-in, per skill.

The honest version of the business case.
These skills remove preparation time, not decisions. Every one drafts and stops, which means a person still reads the output. Any saving that assumes nobody reviews the result is not a saving this catalog supports.

Brand Answer Monitor

Tracks what a researcher finds when they look you up, week over week.

Do this, about two minutes

1. **Download the skill file**
   brand-answer-monitor.zip
   github.com/kesslernity/awesome-copilot-cowork-bots ↓
2. In Cowork, open **Customize** from the left navigation
3. Go to the **Skills** tab
4. Select the arrow next to **Add**, then **Upload skill**, and choose the file
5. Start a **new** chat and say one of these

> *“What does the web say about us?”*

> *“How are we showing up in AI answers?”*

> *“Run this week’s brand check”*

Written to prepare and stop. Cowork still asks before it sends, so approve one action at a time and avoid **always allow** while you are trying it. **AI prepares, people decide.**

And you get back

- A spreadsheet row per question, tracked week by week
- What moved since last week, and the four-week direction
- New sources quoting you for the first time

What it will never do without asking you

- Never claim to show what ChatGPT, Copilot or any other assistant answers. This reports what the open web says about the brand, through Deep Research.
- Never act on the findings: no content is published, no page is edited, nothing is sent.
- Never record a competitor’s non-public information.

THE RULE IT FOLLOWS

A flat week is normal.

Runs when you ask for it. Want it on a timer? Say *“do this every Monday at 9”* and Cowork schedules it. You get 25 schedules, so spend them on the jobs you would otherwise forget.

DESKTOP ONLY
Cowork runs on mobile. Uploaded skills do not. Use a laptop.

YOU NEED
Microsoft 365 Copilot, and Cowork switched on by your admin. Off by default.

IT IS METERED
Cowork bills Copilot Credits as you use it. Your admin sets the policy.

READ IT FIRST
A skill is instructions to the AI. Open the zip and read SKILL.md first; it is plain text.

Competition Monitor

Reports a material change and nothing else. The suppression is the product.

Do this, about two minutes

1. **Download the skill file**
   competition-monitor.zip
   github.com/kesslernity/awesome-copilot-cowork-bots ↓
2. In Cowork, open **Customize** from the left navigation
3. Go to the **Skills** tab
4. Select the arrow next to **Add**, then **Upload skill**, and choose the file
5. Start a **new** chat and say one of these

> *“Anything new from our competitors?”*

> *“Check the competitor list”*

> *“Did anyone launch something?”*

Written to prepare and stop. Cowork still asks before it sends, so approve one action at a time and avoid **always allow** while you are trying it. **AI prepares, people decide.**

And you get back

- A before-and-after table of what actually changed
- One line on why each change matters
- When nothing changed, one line saying so, and nothing else

What it will never do without asking you

- Never access anything behind a login, a paywall or a trial. Public pages only.
- Never report a competitor’s non-public information even if a source offers it.
- Never characterize a competitor’s intent or finances. Report the observed attribute.

THE RULE IT FOLLOWS

Silence is the success state and the most common one.

Runs when you ask for it. Want it on a timer? Say *“do this every Monday at 9”* and Cowork schedules it. You get 25 schedules, so spend them on the jobs you would otherwise forget.

DESKTOP ONLY
Cowork runs on mobile. Uploaded skills do not. Use a laptop.

YOU NEED
Microsoft 365 Copilot, and Cowork switched on by your admin. Off by default.

IT IS METERED
Cowork bills Copilot Credits as you use it. Your admin sets the policy.

READ IT FIRST

Internal Newsletter Builder

Builds the round-up from what actually happened, and leaves a section out rather than filling it.

Do this, about two minutes

1. **Download the skill file**
   internal-newsletter-builder.zip
   github.com/kesslernity/awesome-copilot-cowork-bots
2. In Cowork, open **Customize** from the left navigation
3. Go to the **Skills** tab
4. Select the arrow next to **Add**, then **Upload skill**, and choose the file
5. Start a **new** chat and say one of these

> *"Draft this month's team newsletter"*

> *"What should go in the round-up?"*

> *"Build the internal update"*

Written to prepare and stop. Cowork still asks before it sends, so approve one action at a time and avoid **always allow** while you are trying it. **AI prepares, people decide.**

And you get back

- A Word document in your usual section order
- Every item carrying the link it came from
- Empty sections left out rather than padded

What it will never do without asking you

- Never send or publish. Draft to the user.
- Never include anything on the config exclusion list: individual performance, anything about compensation, unannounced departures…
- Never announce something not already announced elsewhere. A newsletter is not the channel for breaking news to a team.

THE RULE IT FOLLOWS

A thin month produces a thin newsletter.

Runs when you ask for it. Want it on a timer? Say *"do this every Monday at 9"* and Cowork schedules it. You get 25 schedules, so spend them on the jobs you would otherwise forget.

DESKTOP ONLY
Cowork runs on mobile. Uploaded skills do not. Use a laptop.

YOU NEED
Microsoft 365 Copilot, and Cowork switched on by your admin. Off by default.

IT IS METERED
Cowork bills Copilot Credits as you use it. Your admin sets the policy.

Leadership Update Drafter

Writes the upward update in a fixed shape, with the uncomfortable parts kept in.

Do this, about two minutes

1. **Download the skill file**
   leadership-update-drafter.zip
   github.com/kesslernity/awesome-copilot-cowork-bots
2. In Cowork, open **Customize** from the left navigation
3. Go to the **Skills** tab
4. Select the arrow next to **Add**, then **Upload skill**, and choose the file
5. Start a **new** chat and say one of these

> *"Draft my update for leadership"*

> *"Write up my monthly report"*

> *"Prepare my steering committee update"*

Written to prepare and stop. Cowork still asks before it sends, so approve one action at a time and avoid **always allow** while you are trying it. **AI prepares, people decide.**

And you get back

- Where we are, what changed, what is at risk, what I need from you
- A short list of what is still not known
- Facts and opinions kept visibly apart

What it will never do without asking you

- Never send. Draft to the user, always.
- Never soften or omit anything crossing the escalation bar.
- Never attribute a slip or a problem to a named individual.

THE RULE IT FOLLOWS

"Nothing changed this week" is a legitimate update.

Runs when you ask for it. Want it on a timer? Say *"do this every Monday at 9"* and Cowork schedules it. You get 25 schedules, so spend them on the jobs you would otherwise forget.

DESKTOP ONLY
Cowork runs on mobile. Uploaded skills do not. Use a laptop.

YOU NEED
Microsoft 365 Copilot, and Cowork switched on by your admin. Off by default.

IT IS METERED

Calendar Defender

Finds the week's conflicts and the meetings that should not exist, and proposes, never acts.

Do this, about two minutes

1. **Download the skill file calendar-defender.zip**
   github.com/kesslernity/awesome-copilot-cowork-bots
2. In Cowork, open **Customize** from the left navigation
3. Go to the **Skills** tab
4. Select the arrow next to **Add**, then **Upload skill**, and choose the file
5. Start a **new** chat and say one of these

   "Check my week for conflicts"

   "Which meetings can I drop?"

   "Do I have any focus time left?"

Written to prepare and stop. Cowork still asks before it sends, so approve one action at a time and avoid **always allow** while you are trying it. **AI prepares, people decide.**

And you get back

- Your clashes, named meeting by meeting
- Meetings with no stated purpose and no decision to make
- Focus time against your target, and the exact changes to make

What it will never do without asking you

- Never accept, decline, move, shorten, cancel or create anything. Every output is a proposal for the user.
- Never touch anything on the config never-touch list.
- Never characterize a colleague's meeting as a waste of time. Report the absence of an agenda as a fact and let the user decide.

THE RULE IT FOLLOWS

A clean week needs one line.

Runs when you ask for it. Want it on a timer? Say *"do this every Monday at 9"* and Cowork schedules it. You get 25 schedules, so spend them on the jobs you would otherwise forget.

DESKTOP ONLY
Cowork runs on mobile. Uploaded skills do not. Use a laptop.

YOU NEED
Microsoft 365 Copilot, and Cowork switched on by your admin. Off by default.

IT IS METERED

Budget Variance Explainer

Writes the story behind a number somebody else owns.

Do this, about two minutes

1. **Download the skill file**
   budget-variance-explainer.zip
   github.com/kesslernity/awesome-copilot-cowork-bots ↓
2. In Cowork, open **Customize** from the left navigation
3. Go to the **Skills** tab
4. Select the arrow next to **Add**, then **Upload skill**, and choose the file
5. Start a **new** chat and say one of these

> *"Why are we over budget?"*

> *"Explain this variance"*

> *"What is behind the overspend?"*

Written to prepare and stop. Cowork still asks before it sends, so approve one action at a time and avoid **always allow** while you are trying it. **AI prepares, people decide.**

And you get back

- Written commentary in your house structure
- A table of causes, with evidence and how much each explains
- The remainder that stays unexplained, stated plainly

What it will never do without asking you

- Never calculate, recalculate or forecast. Not even arithmetic on supplied figures.
- Never state a cause as certain when the evidence is circumstantial. Label it.
- Never write commentary that attributes a variance to a named individual.

THE RULE IT FOLLOWS

"Largely unexplained" is an honest and useful answer.

Runs when you ask for it. Want it on a timer? Say *"do this every Monday at 9"* and Cowork schedules it. You get 25 schedules, so spend them on the jobs you would otherwise forget.

DESKTOP ONLY
Cowork runs on mobile. Uploaded skills do not. Use a laptop.

YOU NEED

Cloud Cost Digest

Explains what moved on the bill, with the question to ask each owner.

Do this, about two minutes

1. **Download the skill file cloud-cost-digest.zip**
   github.com/kesslernity/awesome-copilot-cowork-bots ↓
2. In Cowork, open **Customize** from the left navigation
3. Go to the **Skills** tab
4. Select the arrow next to **Add**, then **Upload skill**, and choose the file
5. Start a **new** chat and say one of these

> *"What moved on the cloud bill?"*

> *"Explain this month's cloud spend"*

> *"Anything odd in the billing export?"*

Written to prepare and stop. Cowork still asks before it sends, so approve one action at a time and avoid **always allow** while you are trying it. **AI prepares, people decide.**

And you get back

- The total for the period against the one before
- The three biggest movements, with the owner to ask
- Anomalies no explanation could be found for

What it will never do without asking you

- Never state a forecast as a commitment.
- Never recommend terminating, resizing or deleting a resource. Surface the movement and the question; the owner decides.
- The provider's own billing console is the source of truth. This reads an export.

THE RULE IT FOLLOWS

A flat month is a result.

Runs when you ask for it. Want it on a timer? Say *"do this every Monday at 9"* and Cowork schedules it. You get 25 schedules, so spend them on the jobs you would otherwise forget.

DESKTOP ONLY
Cowork runs on mobile. Uploaded skills do not. Use a laptop.

Expense Reconciliation

Finds the gap between what was claimed and what was evidenced, before someone else does.

Do this, about two minutes

1. **Download the skill file**
   expense-reconciliation.zip
   github.com/kesslernity/awesome-copilot-cowork-bots ↓
2. In Cowork, open **Customize** from the left navigation
3. Go to the **Skills** tab
4. Select the arrow next to **Add**, then **Upload skill**, and choose the file
5. Start a **new** chat and say one of these

> *“Check my claims against the receipts”*

> *“What receipts am I missing?”*

> *“Reconcile last month’s expenses”*

Written to prepare and stop. Cowork still asks before it sends, so approve one action at a time and avoid **always allow** while you are trying it. **AI prepares, people decide.**

And you get back

- Every claim matched to its receipt, or flagged
- Counts by status, and the total value unmatched
- A drafted chaser for each person to chase

What it will never do without asking you

- Draft, never send. Chasers are drafts.
- Never approve, reject or adjust a claim. Never state a reimbursable amount as final.
- The expense system and the finance ledger are the source of truth. This reads mail.

THE RULE IT FOLLOWS

A clean reconciliation is the best outcome.

Runs when you ask for it. Want it on a timer? Say *“do this every Monday at 9”* and Cowork schedules it. You get 25 schedules, so spend them on the jobs you would otherwise forget.

DESKTOP ONLY
Cowork runs on mobile. Uploaded skills do not. Use a laptop.

Invoice & Vendor Follow-up

Finds the invoice threads that stopped, with age and amount, and drafts the nudge.

Do this, about two minutes

1. **Download the skill file**
   invoice-vendor-followup.zip
   github.com/kesslernity/awesome-copilot-cowork-bots ↓
2. In Cowork, open **Customize** from the left navigation
3. Go to the **Skills** tab
4. Select the arrow next to **Add**, then **Upload skill**, and choose the file
5. Start a **new** chat and say one of these

> *"Which invoices have gone quiet?"*

> *"Who has not replied about payment?"*

> *"Draft the chasers for unpaid invoices"*

Written to prepare and stop. Cowork still asks before it sends, so approve one action at a time and avoid **always allow** while you are trying it. **AI prepares, people decide.**

And you get back

- Every stalled thread, with its age and amount
- Who you are waiting on, and who is waiting on you
- A drafted nudge for each one, unsent

What it will never do without asking you

- Draft, never send. Especially never send a chase to a counterparty on the config exclusion list…
- Never state an amount as owed. The ledger is the source of truth.
- Never escalate a ladder step on your own. The user chooses the step.

THE RULE IT FOLLOWS

Nothing outstanding is a good week.

Runs when you ask for it. Want it on a timer? Say *"do this every Monday at 9"* and Cowork schedules it. You get 25 schedules, so spend them on the jobs you would otherwise forget.

DESKTOP ONLY
Cowork runs on mobile. Uploaded skills do not. Use a laptop.

YOU NEED

Subscription Hunter

Surfaces every recurring charge in the mailbox before it renews itself, with a drafted reply ready.

Do this, about two minutes

1. **Download the skill file subscription-hunter.zip**
   github.com/kesslernity/awesome-copilot-cowork-bots
2. In Cowork, open **Customize** from the left navigation
3. Go to the **Skills** tab
4. Select the arrow next to **Add**, then **Upload skill**, and choose the file
5. Start a **new** chat and say one of these

   "What are we subscribed to?"

   "What renews in the next 30 days?"

   "Find the subscriptions we forgot"

Written to prepare and stop. Cowork still asks before it sends, so approve one action at a time and avoid **always allow** while you are trying it. **AI prepares, people decide.**

And you get back

- An Excel sheet of every renewal, each row linked to its source
- What renews in the next 30 days, and what looks like waste
- A drafted cancellation or renegotiation, unsent

What it will never do without asking you

- Draft, never send. Cancellation and renegotiation replies are saved as drafts for the user to read, edit and send.
- Never cancel, downgrade or modify anything in a vendor portal, and never follow a cancellation link.
- Never state an amount as the authoritative figure. Finance systems and the contract are the source of truth; this reads what arrived in the mailbox.

THE RULE IT FOLLOWS

Finding nothing is a success.

Runs when you ask for it. Want it on a timer? Say *"do this every Monday at 9"* and Cowork schedules it. You get 25 schedules, so spend them on the jobs you would otherwise forget.

DESKTOP ONLY
Cowork runs on mobile. Uploaded skills do not. Use a laptop.

YOU NEED
Microsoft 365 Copilot, and Cowork switched on by your admin. Off by default.

IT IS METERED

Change Advisory Board Prep

Builds the pack from what people actually wrote, and names every change that arrived without a.

Do this, about two minutes

1. **Download the skill file**
   change-advisory-prep.zip
   github.com/kesslernity/awesome-copilot-cowork-bots ↓
2. In Cowork, open **Customize** from the left navigation
3. Go to the **Skills** tab
4. Select the arrow next to **Add**, then **Upload skill**, and choose the file
5. Start a **new** chat and say one of these

> *“Prepare the pack for the next CAB”*

> *“What changes are up for review?”*

> *“Which changes have no rollback plan?”*

Written to prepare and stop. Cowork still asks before it sends, so approve one action at a time and avoid **always allow** while you are trying it. **AI prepares, people decide.**

And you get back

- The board pack: change, owner, window, risk, rollback
- Which changes arrived with fields missing
- Prior incidents on the same systems

What it will never do without asking you

- Never approve, reject or schedule a change. The board decides.
- Never write a rollback plan. Report its absence.
- Never state a risk rating of your own. Report the proposer’s and say it is theirs.

THE RULE IT FOLLOWS

A board with nothing to review is fine.

Runs when you ask for it. Want it on a timer? Say *“do this every Monday at 9”* and Cowork schedules it. You get 25 schedules, so spend them on the jobs you would otherwise forget.

DESKTOP ONLY
Cowork runs on mobile. Uploaded skills do not. Use a laptop.

YOU NEED
Microsoft 365 Copilot, and Cowork switched on by your admin. Off by default.

IT IS METERED
Cowork bills Copilot Credits as you use it. Your admin sets the policy.

READ IT FIRST

Defect Intake and Triage

Turns “it’s broken” into something an engineer can act on, or says exactly what is still missing.

Do this, about two minutes

1. **Download the skill file**
   defect-intake-triage.zip
   github.com/kesslernity/awesome-copilot-cowork-bots ↓
2. In Cowork, open **Customize** from the left navigation
3. Go to the **Skills** tab
4. Select the arrow next to **Add**, then **Upload skill**, and choose the file
5. Start a **new** chat and say one of these

> *“Turn this bug report into a ticket”*

> *“Is there enough here to raise a defect?”*

> *“Triage what came in”*

Written to prepare and stop. Cowork still asks before it sends, so approve one action at a time and avoid **always allow** while you are trying it. **AI prepares, people decide.**

And you get back

- A card turning the report into a ticket draft
- The exact fields still missing, written as questions
- Possible duplicates, linked

What it will never do without asking you

- Never file, create, assign or comment on a ticket without approval. Filing requires a work tracker plugin and the user’s explicit go.
- Never attempt reproduction. No terminal, no staging, no browser steps.
- Never declare a duplicate, a root cause or a severity the config does not support.

THE RULE IT FOLLOWS

A triage that concludes “not enough information, here are the three questions” is a success.

Runs when you ask for it. Want it on a timer? Say *“do this every Monday at 9”* and Cowork schedules it. You get 25 schedules, so spend them on the jobs you would otherwise forget.

DESKTOP ONLY
Cowork runs on mobile. Uploaded skills do not. Use a laptop.

YOU NEED
Microsoft 365 Copilot, and Cowork switched on by your admin. Off by default.

IT IS METERED
Cowork bills Copilot Credits as you use it. Your admin sets the policy.

Incident Digest

Rebuilds what happened and when, from the traffic, so the review starts from a timeline instead of.

Do this, about two minutes

1. **Download the skill file incident-digest.zip**
   github.com/kesslernity/awesome-copilot-cowork-bots
2. In Cowork, open **Customize** from the left navigation
3. Go to the **Skills** tab
4. Select the arrow next to **Add**, then **Upload skill**, and choose the file
5. Start a **new** chat and say one of these

> *"Build the timeline for this incident"*

> *"What happened, and when?"*

> *"Prepare the incident review"*

Written to prepare and stop. Cowork still asks before it sends, so approve one action at a time and avoid **always allow** while you are trying it. **AI prepares, people decide.**

And you get back

- A dated timeline of what happened
- What was observed, what was believed, what is known
- Open questions, each with an owner

What it will never do without asking you

- Never post to a channel, never reply to a thread, never update a status page.
- Never assign an action. List open questions with suggested owners for a human to assign.
- Never state a root cause. Surface what the traffic says and label it belief or finding.

THE RULE IT FOLLOWS

No blame, ever.

Runs when you ask for it. Want it on a timer? Say *"do this every Monday at 9"* and Cowork schedules it. You get 25 schedules, so spend them on the jobs you would otherwise forget.

DESKTOP ONLY
Cowork runs on mobile. Uploaded skills do not. Use a laptop.

YOU NEED
Microsoft 365 Copilot, and Cowork switched on by your admin. Off by default.

IT IS METERED
Cowork bills Copilot Credits as you use it. Your admin sets the policy.

Internal Expert Finder

Answers “who here has already solved this”, with the evidence, before anyone reinvents it.

Do this, about two minutes

1. **Download the skill file**
   internal-expert-finder.zip
   github.com/kesslernity/awesome-copilot-cowork-bots ↓
2. In Cowork, open **Customize** from the left navigation
3. Go to the **Skills** tab
4. Select the arrow next to **Add**, then **Upload skill**, and choose the file
5. Start a **new** chat and say one of these

   “Who here has done this before?”

   “Find someone who knows this system”

   “Who should I ask about this?”

Written to prepare and stop. Cowork still asks before it sends, so approve one action at a time and avoid **always allow** while you are trying it. **AI prepares, people decide.**

And you get back

- A shortlist of people, with the evidence for each
- Who to ask first, and who to ask if they are away
- Where it looked, so you can see what it missed

What it will never do without asking you

- Never external. No sourcing, no candidates, no professional networks, no recruitment use.
- Never infer expertise from a job title, a team name or a reporting line.
- Never surface a document the user cannot already access. Enterprise Search respects permissions and this skill must not try to work around that.

THE RULE IT FOLLOWS

Finding nobody is a real and useful answer.

Runs when you ask for it. Want it on a timer? Say *“do this every Monday at 9”* and Cowork schedules it. You get 25 schedules, so spend them on the jobs you would otherwise forget.

DESKTOP ONLY
Cowork runs on mobile. Uploaded skills do not. Use a laptop.

YOU NEED

Interview Loop Coordinator

Makes a panel cover the whole bar once, instead of four people asking the same question.

Do this, about two minutes

1. **Download the skill file**
   interview-loop-coordinator.zip
   github.com/kesslernity/awesome-copilot-cowork-bots ↓
2. In Cowork, open **Customize** from the left navigation
3. Go to the **Skills** tab
4. Select the arrow next to **Add**, then **Upload skill**, and choose the file
5. Start a **new** chat and say one of these

   “Set up the panel for this role”

   “Who covers what in the loop?”

   “Pull the interview feedback together”

Written to prepare and stop. Cowork still asks before it sends, so approve one action at a time and avoid **always allow** while you are trying it. **AI prepares, people decide.**

And you get back

- Who covers which competency, and what nobody covers
- What each interviewer needs beforehand
- Afterwards, the evidence, with disagreements shown

What it will never do without asking you

- Never recommend hire or no-hire, never rank candidates, never produce an overall score.
- Never create or send calendar invitations. Propose.
- Never include anything about a candidate not supplied for this process, and never search for a candidate externally.

THE RULE IT FOLLOWS

The pack never produces a hire recommendation.

Runs when you ask for it. Want it on a timer? Say *“do this every Monday at 9”* and Cowork schedules it. You get 25 schedules, so spend them on the jobs you would otherwise forget.

DESKTOP ONLY
Cowork runs on mobile. Uploaded skills do not. Use a laptop.

YOU NEED
Microsoft 365 Copilot, and Cowork switched on by your admin. Off by default.

IT IS METERED

Onboarding Buddy

Turns “they start Monday” into a dated plan built from what the team actually has.

Do this, about two minutes

1. **Download the skill file onboarding-buddy.zip**
   github.com/kesslernity/awesome-copilot-cowork-bots
2. In Cowork, open **Customize** from the left navigation
3. Go to the **Skills** tab
4. Select the arrow next to **Add**, then **Upload skill**, and choose the file
5. Start a **new** chat and say one of these

> *“Plan the first two weeks for our joiner”*

> *“Who should they meet in week one?”*

> *“What should they read before Monday?”*

Written to prepare and stop. Cowork still asks before it sends, so approve one action at a time and avoid **always allow** while you are trying it. **AI prepares, people decide.**

And you get back

- A day-by-day plan for the first fortnight
- Who they meet, and why that person
- What exists for them to read, and what is missing

What it will never do without asking you

- Never create calendar events or send invitations. Propose holds for approval.
- Never include anything about the joiner’s compensation, background or personal details.
- Never surface documents the joiner will not have permission to open once they start: note them as access needed instead.

THE RULE IT FOLLOWS

A short plan with real links beats a full one with placeholders.

Runs when you ask for it. Want it on a timer? Say *“do this every Monday at 9”* and Cowork schedules it. You get 25 schedules, so spend them on the jobs you would otherwise forget.

DESKTOP ONLY
Cowork runs on mobile. Uploaded skills do not. Use a laptop.

YOU NEED
Microsoft 365 Copilot, and Cowork switched on by your admin. Off by default.

IT IS METERED
Cowork bills Copilot Credits as you use it. Your admin sets the policy.

Document Transmittal Tracker

Answers “what did we send, and who still owes us a response”, from the mail itself.

Do this, about two minutes

1. **Download the skill file**
   document-transmittal-tracker.zip ↓
   github.com/kesslernity/awesome-copilot-cowork-bots
2. In Cowork, open **Customize** from the left navigation
3. Go to the **Skills** tab
4. Select the arrow next to **Add**, then **Upload skill**, and choose the file
5. Start a **new** chat and say one of these

   “What did we send the client?”

   “Who still owes us a response?”

   “What transmittals are overdue?”

Written to prepare and stop. Cowork still asks before it sends, so approve one action at a time and avoid **always allow** while you are trying it. **AI prepares, people decide.**

And you get back

- What was issued, to whom, and on what date
- What is overdue, grouped by party
- Revisions that quietly superseded an open item

What it will never do without asking you

- Never issue, reissue or transmit a document.
- Never chase a party directly. Drafts go to the user.
- Never mark anything as approved. Approval is a recorded act in the project’s own system.

THE RULE IT FOLLOWS

Nothing overdue is the goal, not a failure of the skill.

Runs when you ask for it. Want it on a timer? Say *“do this every Monday at 9”* and Cowork schedules it. You get 25 schedules, so spend them on the jobs you would otherwise forget.

DESKTOP ONLY
Cowork runs on mobile. Uploaded skills do not. Use a laptop.

YOU NEED
Microsoft 365 Copilot, and Cowork switched on by your admin. Off by default.

IT IS METERED

Lessons Learned Harvester

Finds the lesson that has now been learned four times, which is the only kind worth acting on.

Do this, about two minutes

1. **Download the skill file lessons-learned-harvester.zip**
   github.com/kesslernity/awesome-copilot-cowork-bots
2. In Cowork, open **Customize** from the left navigation
3. Go to the **Skills** tab
4. Select the arrow next to **Add**, then **Upload skill**, and choose the file
5. Start a **new** chat and say one of these

> *"What keeps going wrong across projects?"*

> *"Pull the lessons from the close-outs"*

> *"What have we learned more than once?"*

Written to prepare and stop. Cowork still asks before it sends, so approve one action at a time and avoid **always allow** while you are trying it. **AI prepares, people decide.**

And you get back

- Themes, and how many separate projects hit each one
- The lessons recurring across three projects or more
- Where the same recommendation keeps being made

What it will never do without asking you

- Never attribute a lesson to a named individual. Lessons attach to projects and processes.
- Never state a cause the source material does not state.
- Never rewrite a recommendation into something stronger than what was written.

THE RULE IT FOLLOWS

One project's lessons are not a register.

Runs when you ask for it. Want it on a timer? Say *"do this every Monday at 9"* and Cowork schedules it. You get 25 schedules, so spend them on the jobs you would otherwise forget.

DESKTOP ONLY
Cowork runs on mobile. Uploaded skills do not. Use a laptop.

YOU NEED
Microsoft 365 Copilot, and Cowork switched on by your admin. Off by default.

IT IS METERED
Cowork bills Copilot Credits as you use it. Your admin sets the policy.

RFI and Query Tracker

Shows which open questions are actually blocking work, rather than which are merely old.

Do this, about two minutes

1. **Download the skill file**
   rfi-query-tracker.zip
   github.com/kesslernity/awesome-copilot-cowork-bots ↓
2. In Cowork, open **Customize** from the left navigation
3. Go to the **Skills** tab
4. Select the arrow next to **Add**, then **Upload skill**, and choose the file
5. Start a **new** chat and say one of these

> *“Which RFIs are still open?”*

> *“What is blocking work right now?”*

> *“Who owes us an answer?”*

Written to prepare and stop. Cowork still asks before it sends, so approve one action at a time and avoid **always allow** while you are trying it. **AI prepares, people decide.**

And you get back

- Every open question, with who owes the answer
- Which ones are actually blocking work
- Overdue items with no stated impact

What it will never do without asking you

- Never answer a query on anyone’s behalf, and never draft a technical answer. This tracks; it does not opine on design, method or compliance.
- Never chase externally. Drafts go to the user.
- Never infer what a query blocks.

THE RULE IT FOLLOWS

An empty log is a good day on a project.

Runs when you ask for it. Want it on a timer? Say *“do this every Monday at 9”* and Cowork schedules it. You get 25 schedules, so spend them on the jobs you would otherwise forget.

DESKTOP ONLY
Cowork runs on mobile. Uploaded skills do not. Use a laptop.

YOU NEED
Microsoft 365 Copilot, and Cowork switched on by your admin. Off by default.

IT IS METERED
Cowork bills Copilot Credits as you use it. Your admin sets the policy.

Account Expert

One skill, one customer, context rebuilt from the tenant rather than from a CRM.

Do this, about two minutes

1. **Download the skill file account-expert.zip**
   github.com/kesslernity/awesome-copilot-cowork-bots ↓
2. In Cowork, open **Customize** from the left navigation
3. Go to the **Skills** tab
4. Select the arrow next to **Add**, then **Upload skill**, and choose the file
5. Start a **new** chat and say one of these

   “Brief me before the customer meeting”

   “What is happening with this account?”

   “Catch me up on them”

Written to prepare and stop. Cowork still asks before it sends, so approve one action at a time and avoid **always allow** while you are trying it. **AI prepares, people decide.**

And you get back

- What changed on the account since last time
- Open commitments, both yours and theirs
- Who went quiet, and the questions still open

What it will never do without asking you

- Never contact the customer. Drafts only, and only when asked.
- Never produce a health score, a risk rating or a close probability.
- Never share internal commentary about the account externally, and never include internal pricing discussion in anything drafted to the customer.

THE RULE IT FOLLOWS

A quiet account is a finding.

Runs when you ask for it. Want it on a timer? Say *“do this every Monday at 9”* and Cowork schedules it. You get 25 schedules, so spend them on the jobs you would otherwise forget.

DESKTOP ONLY
Cowork runs on mobile. Uploaded skills do not. Use a laptop.

YOU NEED
Microsoft 365 Copilot, and Cowork switched on by your admin. Off by default.

IT IS METERED

One-to-One Prep

Walks into the 1:1 knowing what you owe them, which is the half most prep skips.

Do this, about two minutes

1. **Download the skill file one-to-one-prep.zip**
   github.com/kesslernity/awesome-copilot-cowork-bots
2. In Cowork, open **Customize** from the left navigation
3. Go to the **Skills** tab
4. Select the arrow next to **Add**, then **Upload skill**, and choose the file
5. Start a **new** chat and say one of these

> *“Prep my 1:1 with Sam”*

> *“What do I owe them?”*

> *“What did they raise last time?”*

Written to prepare and stop. Cowork still asks before it sends, so approve one action at a time and avoid **always allow** while you are trying it. **AI prepares, people decide.**

And you get back

- What they raised, quoted and linked
- What you owe them, and what is still unanswered
- Items carried over from last time, marked and counted

What it will never do without asking you

- Never assess, rate, or characterize the person. No performance language, no sentiment read, no “seems disengaged”.
- Never read 1:1 notes about this person written by someone else.
- Never draft feedback, and never prepare anything for a performance process.

THE RULE IT FOLLOWS

An empty brief is a good sign.

Runs when you ask for it. Want it on a timer? Say *“do this every Monday at 9”* and Cowork schedules it. You get 25 schedules, so spend them on the jobs you would otherwise forget.

DESKTOP ONLY
Cowork runs on mobile. Uploaded skills do not. Use a laptop.

YOU NEED

Project Decomposer

Turns a project into tasks somebody can actually finish, each with a stated way to tell it is done.

Do this, about two minutes

1. **Download the skill file project-decomposer.zip**
   github.com/kesslernity/awesome-copilot-cowork-bots
2. In Cowork, open **Customize** from the left navigation
3. Go to the **Skills** tab
4. Select the arrow next to **Add**, then **Upload skill**, and choose the file
5. Start a **new** chat and say one of these

> *"Break this project into tasks"*

> *"Who owns what on this?"*

> *"Turn this goal into a plan"*

Written to prepare and stop. Cowork still asks before it sends, so approve one action at a time and avoid **always allow** while you are trying it. **AI prepares, people decide.**

And you get back

- A card per task, each with a named owner
- How you will know each task is actually finished
- The whole set saved to a file, so it survives the chat

What it will never do without asking you

- Plans only. Never create tasks in Planner or To Do, never send anything, never book time.
- Never assign a named person who has not already been associated with this work in the evidence.
- Never state a date as agreed unless the evidence shows it was agreed.

THE RULE IT FOLLOWS

Returning fewer tasks is usually better.

Runs when you ask for it. Want it on a timer? Say *"do this every Monday at 9"* and Cowork schedules it. You get 25 schedules, so spend them on the jobs you would otherwise forget.

DESKTOP ONLY
Cowork runs on mobile. Uploaded skills do not. Use a laptop.

Team Lead Mode

Runs the pack in order and assembles one review, rather than making you run four things.

Do this, about two minutes

1. **Download the skill file**
   team-lead-mode.zip
   github.com/kesslernity/awesome-copilot-cowork-bots
2. In Cowork, open **Customize** from the left navigation
3. Go to the **Skills** tab
4. Select the arrow next to **Add**, then **Upload skill**, and choose the file
5. Start a **new** chat and say one of these

   “Set me up for the week”

   “Run my team lead review”

   “Prepare everything for Monday”

Written to prepare and stop. Cowork still asks before it sends, so approve one action at a time and avoid **always allow** while you are trying it. **AI prepares, people decide.**

And you get back

- One document: the three things that need you this week
- A section per report and per workstream, plus your calendar
- A run report saying which parts worked and which failed

What it will never do without asking you

- Inherits every boundary of the skills it calls, and may not relax any of them.
- Never send, post, create or schedule anything. It assembles.
- Never fill a degraded section with its own analysis. Degraded means thinner, not invented.

THE RULE IT FOLLOWS

A quiet week produces a short review.

Runs when you ask for it. Want it on a timer? Say *“do this every Monday at 9”* and Cowork schedules it. You get 25 schedules, so spend them on the jobs you would otherwise forget.

DESKTOP ONLY
Cowork runs on mobile. Uploaded skills do not. Use a laptop.

YOU NEED
Microsoft 365 Copilot, and Cowork switched on by your admin. Off by default.

IT IS METERED
Cowork bills Copilot Credits as you use it. Your admin sets the policy.

That is the whole catalog

Free, finished, and not a funnel. If you want the paid work, it is one link away, and if you never click it the skills still work.

Everything in this pack

- 23 skills, free, MIT license. No purchase, no subscription, no email.
- One A4 page per skill, plus pages for the admin, the CISO and the CFO.
- kesslernity.com/cowork-bots for the browsable version and the downloads.
- github.com/kesslernity/awesome-copilot-cowork-bots for the source and the research notes.

If this was useful

- AI at Work, a biweekly briefing on getting this to land in a real organization.
- Verified facts, tested prompts, and what changed that quarter. Free.
- kesslernity.com/newsletter

These are portable

- A skill is a plain SKILL.md file: frontmatter, then instructions in Markdown.
- The prompt is the asset. The model behind it is a commodity.
- Cowork itself runs several model families and picks per task.
- The same file shape is read by other agents, so the thinking travels even if the runtime does not.

When you want more than a free file

- kesslernity.com/store carries the paid kits: rollout plans, governance checks, cost models.
- Written by the same practitioner, under the same rule: nothing claimed that is not verified.
- Nothing in this pack is a trial of anything. It is finished and it is yours.

One last thing, and it is the whole point.
Every skill here prepares and stops. If you take nothing else from this pack, take the habit: write the boundary into the file, name the case where the right answer is silence, and make the output checkable in seconds. That works in any tool, including the one you build yourself. AI prepares, people decide.
