MICROSOFT 365 COPILOT COWORK · **IT & OPS** · FREE, MIT LICENSE

Defect Intake and Triage

Turns “it’s broken” into something an engineer can act on, or says exactly what is still missing.

Do this, about two minutes

1. **Download the skill file**
   defect-intake-triage.zip
   github.com/kesslernity/awesome-copilot-cowork-bots ↓
2. In Cowork, open **Customize** from the left navigation
3. Go to the **Skills** tab
4. Select the arrow next to **Add**, then **Upload skill**, and choose the file
5. Start a **new** chat and say one of these

   “Turn this bug report into a ticket”

   “Is there enough here to raise a defect?”

   “Triage what came in”

Written to prepare and stop. Cowork still asks before it sends, so approve one action at a time and avoid **always allow** while you are trying it. **AI prepares, people decide.**

And you get back

- A card turning the report into a ticket draft
- The exact fields still missing, written as questions
- Possible duplicates, linked

What it will never do without asking you

- Never file, create, assign or comment on a ticket without approval. Filing requires a work tracker plugin and the user’s explicit go.
- Never attempt reproduction. No terminal, no staging, no browser steps.
- Never declare a duplicate, a root cause or a severity the config does not support.

THE RULE IT FOLLOWS

A triage that concludes “not enough information, here are the three questions” is a success.

Runs when you ask for it. Want it on a timer? Say *“do this every Monday at 9”* and Cowork schedules it. You get 25 schedules, so spend them on the jobs you would otherwise forget.

DESKTOP ONLY
Cowork runs on mobile. Uploaded skills do not. Use a laptop.

YOU NEED
Microsoft 365 Copilot, and Cowork switched on by your admin. Off by default.

IT IS METERED
Cowork bills Copilot Credits as you use it. Your admin sets the policy.

READ IT FIRST
A skill is instructions to the AI. Open the zip and read SKILL.md first; it is plain text.
